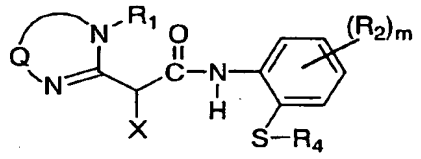
ABSTRACT

A yellow dye-forming coupler represented by formula (I):

formula (I)



wherein Q represents a group of nonmetallic atoms that form a 5- to 7-membered ring in combination with the -N=C-N(R_1)-; R_1 and R_2 each represent a substituent; R_4 represents an alkyl group; m represents an integer of 0 to 4; and X represents a hydrogen atom, or a group capable of being split-off upon a coupling reaction with an oxidized product of a developing agent; and when R_4 represents a primary alkyl group, R_1 represents $-(CH_2)_3O-R_{101}$ in which R_{101} is an alkyl group having 4 to 8 carbon atoms. A silver halide color photographic light-sensitive material having at least one yellow dye-forming coupler represented by formula (I) in at least one layer provided on a support.
